

SIP Trunking

SIP Trunking is just a techy term for one connection that delivers Internet and voice—or VoIP, in which the IP doesn't just sit around when you're not on calls. Either way, it's a great way to get all the communications you need for a fraction of the price. And our solution works with analog, IP and PRI systems so you can squeeze more out of those investments, too.

Streamline Your Data & Voice

Satisfy your voice and data needs with single-connection SIP Trunking that simplifies IT and maximizes ROI.

FEATURES:

Convergence: Includes high-speed internet, voice, managed router and calling features.

Voice Prioritization: Ensures calls coming into and going out of your business always receive priority over other network traffic for high-quality communications.

Flexibility: Offers a wide variety of services such as voice lines, PRIs, SIP and high-bandwidth applications.

Scalability: Supports businesses of all sizes, from one call path to thousands.

BENEFITS:

Tailored features: Provides the ability to customize features for your unique network design.

Quality of service: Leverages Kinetic Business's state-of-the-art, fully redundant IP network and on-premises integrated access devices to ensure the highest quality of service.

Future-proof network: Works with your current equipment today, while providing the foundation to upgrade to full IP systems in the future.

Local support: Kinetic Business delivers locally based technical support so provisioning and upgrades are done quickly. Our Network Operations Center (NOC) provides 24x7 proactive network management and support.

SIP capability: Combines your voice and data on a single circuit, reducing overall telecom costs and delivering feature-rich VoIP capabilities to operate at peak efficiency

- One Converged Connection
- More Savings and ROI
- High-Quality Connections
